Kolkata, West Bengal

OBJECTIVE

B.Sc. Data Science student with hands-on experience building Python-based machine learning models for real business problems — including customer churn prediction, insurance fraud detection, and employee turnover analysis. Seeking a data analytics internship to apply skills in data analysis, visualisation, and SQL to drive impactful, real-world business decisions.

EDUCATION

B.Sc. in Data Science

2024 – 2028

Techno India University, Kolkata — Salt Lake Campus | 2nd Year | CGPA: 8.55

Class XII

Burdwan Model School | Percentage: 71.6%

Class X

St. Xavier's School | Percentage: 84.4%

CERTIFICATIONS

- **Data Science Course** — CodeWithHarry
- **Data Analytics Course** — CodeWithHarry

TECHNICAL SKILLS

Languages: Python, SQL

Python Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-Learn, OpenCV

Tools & Platforms: MS Excel, MySQL

Statistical Modelling: Descriptive Statistics, Inferential Statistics, Regression Analysis, Hypothesis Testing, ANOVA, Bayesian Statistics

Other Skills: Communication and Interpersonal Skills, Problem-Solving and Critical Thinking.

Areas of Interest: Data Analytics, Machine Learning, Deep Learning, Generative AI, Agentic AI, Computer Vision

ACADEMIC PROJECTS

Customer Churn Prediction

Python, Scikit-Learn | 94.7% Accuracy

- Built a churn classification model using Scikit-Learn on telecom usage and demographic data, enabling data-driven retention decisions for at-risk customer segments.
- Engineered features from raw data and optimised the precision-recall trade-off to minimise false negatives, reducing churn misclassification risk for business stakeholders.

Vehicle Insurance Fraud Detection

Python, Pandas | 89.0% Accuracy

- Built a fraud detection model on structured insurance claims data through EDA-driven feature selection and pattern analysis, supporting cost-saving decisions by reducing false positive flags.
- Performed trend and pattern analysis to identify anomalous claims; improved model reliability through iterative feature engineering.

Employee Turnover Prediction

Python, Pandas, Scikit-Learn | HR Analytics

- Built a predictive turnover model translating HR data into actionable retention insights, helping organisations identify high-risk employees before attrition occurs.

- Cleaned, encoded, and processed structured HR datasets; framed results as data-driven recommendations to support cross-functional decision-making.

JARVIS Voice Assistant

Python, NLP, APIs

- Developed a Python-based voice assistant with wake-word detection, NLP-driven query handling, and text-to-speech, integrating live news and web APIs for real-time answers.
- Features include opening websites, playing music, reading live news headlines, and answering general knowledge questions using NLP.

ACHIEVEMENTS & EXTRACURRICULARS

- **Bronze Medal** — International General Knowledge Olympiad (IGKO)
- **U-19 Runner-Up** — Inter-School Football Tournament, 2023, representing St. Xavier's School
- Passionate about cleaning, analysing, and turning raw data into actionable insights; actively following open-source ML/AI developments.
